Compliant Providers

CLIENT NAME	CLIENT TYPE ¹	EQUIPMENT TYPE ²	COMPLIANCE TYPE ³	CONTACT
CATCH Power Solar Relay	Cloud	Gateway	GC	(02) 5700 5717
QGE Gateway	Direct	Gateway	G	(07) 3846 6656 dynamic.connections@qge.com.au
Redback Inverters	Cloud	Inverter	GC	1300 240 182
ZECO Marshall	Cloud	Gateway	GC	support@datamarshall.au
Sungrow Inverters	Cloud	Inverter	GC	service@sungrowpower.com.au

Compliance refers to the SEP2 Communication Client and *not* specific inverters or devices. Please confirm with the provider for more information about supported inverter products or device combinations.

Note: We are actively working with other Australian utilities to establish a national certification and listing process. Until this national process is established, we cannot communicate with devices certified for other jurisdictions⁴ until they are listed in the table above. However, there are only minor configuration differences between jurisdictions and obtaining mutual compliance is a straightforward process as detailed in our handbook.

¹ Clients can either communicate **Direct** to the device or via a 3rd Party **Cloud** Proxy (also known as Cloud Aggregator).

² Communication clients can either be software running in the **Inverter** or on a hardware **Gateway** device.

³ The compliance types indicate what subset of functions the client program has been tested for – **G**: Generation **L**: Load **C**: In-Band Registration **S**: Subscription Notifications.

For more information, refer to the [CSIP-AUS Test Procedures](#)

⁴ The CEC's [Inverters with Software Communication Clients](#) lists inverters configured to work in South Australia
