

Community Update: SunSouth Power Project

Important powerline works are underway around Corbould Park, as part of the SunSouth Power Project, with short road closures and traffic delays planned for Caloundra Road (including Westaway Road).

The Project includes a new 132kV powerline and an additional new substation. It will strengthen the local power supply between Caloundra and Bells Creek, support the region's growing population and planned development, and improve our ability to restore power across the wider region.

Helicopter works planned

We are using a helicopter to install the wires onto the new overhead powerline. This method allows us to complete the work safely and efficiently.

Other construction activities are also continuing as part of the project.

A specialist helicopter and highly skilled crews will be stringing wires for the new major powerline from the air.

What to expect

For the safety of everyone, **Caloundra Road (including Westaway Road) will close briefly**, while the helicopter is operating and heavy vehicles are moving through the work area.

This critical work will take place:

- **5.00am-8.00am, Saturday, 12 September**
- **5.00am-8.00am, Sunday, 13 September**

Please note that these works are subject to weather and traffic control requirements. Scheduled dates and times may change.

Please allow extra travel time, and follow traffic controllers' directions, or use an alternative route if possible. Electronic signs will provide the latest road closure messages.

Local residents and businesses may also experience:

- Noise – from the low-flying helicopter. Please keep pets secure and ensure livestock are safely contained while the helicopter is operating.
- Dust – created during aircraft take-off and landing. Please take care if nearby.

We will do all we can to minimise the impact of these works. They do not require the power to be interrupted to any nearby properties.

During these works, traffic delays are necessary to allow for the safe heli-stringing of the powerlines and for heavy vehicles movement around the **red** area shown.

Please note that these works are subject to weather and traffic control requirements. Scheduled dates and times may change.
